

Image Print Manager

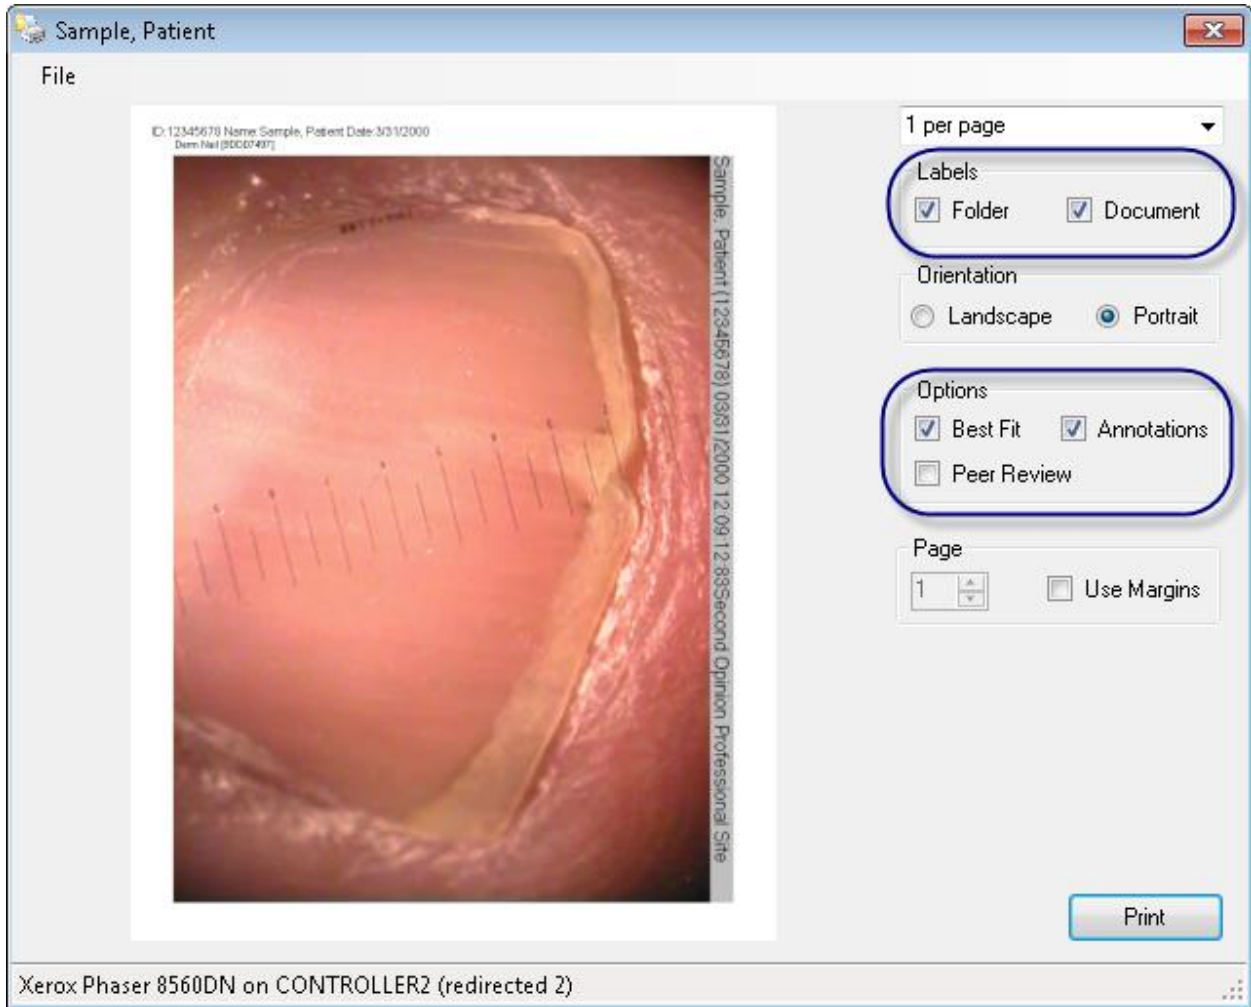

The **Second Opinion**™ Image Print Manager is a simple to use tool to manage the process of printing all or selected images from a Patient's folder.

Note: If you are only going to print selected images, select the images before running the **Image Print Manager**.

To start the application, **Click** on the **Image Print Manager** tool bar button or **Click** the **New Document** button, expand the **Tools** section and **Click** on **Image Print Manager**.

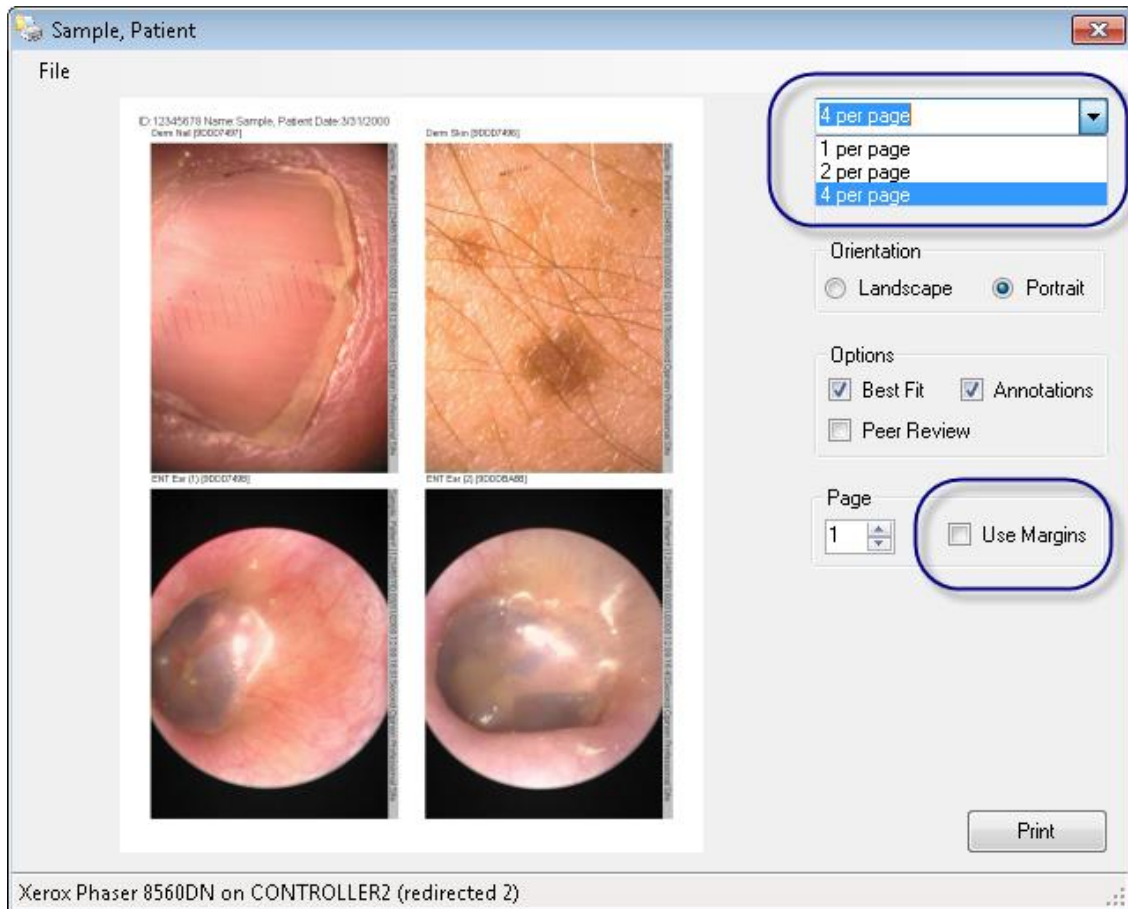

Before printing, the Image Print Manager needs to be configured.

Second Opinion

Telemedicine Solutions, Inc.

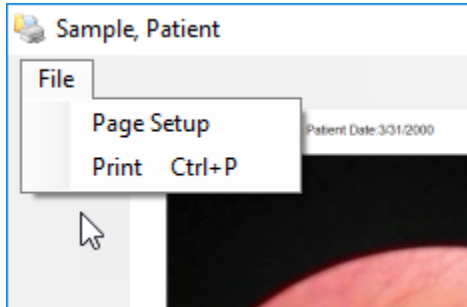

Choose how many images to print per page, from 1 to 4 images per page. Choose **Orientation**, **Landscape** or **Portrait**. Choose **All** or **Selected** Documents to print. The **Best Fit** selection will allow the program to rotate and/or resize the images to make use of the maximum print area.

During the print process there are a few helpful selections like **Peer Review**, which will strip all of the patient identifiers from the images; **Annotations**, when checked, any annotations found for an image will be permanently embedded in the image. Choose if you want **Labels** to print for the **Documents** and / or **Folders**. Leaving both boxes unchecked will cause no labels to print.

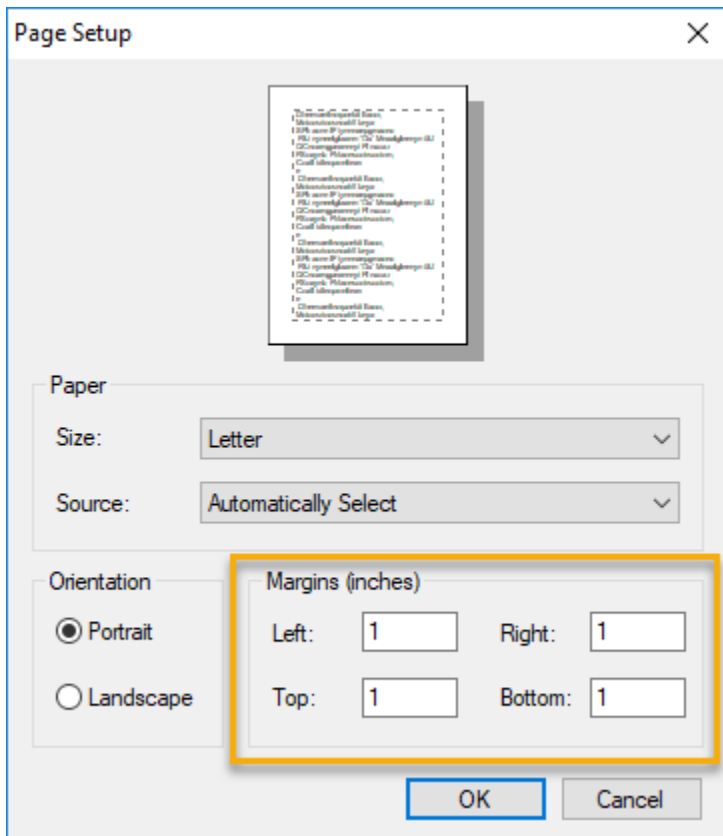

Note: Select the **Use Margins** option if the printed images are cropped off by the printer.

Click **OK** when you have made all of your selections.

Page Setup and Print Settings

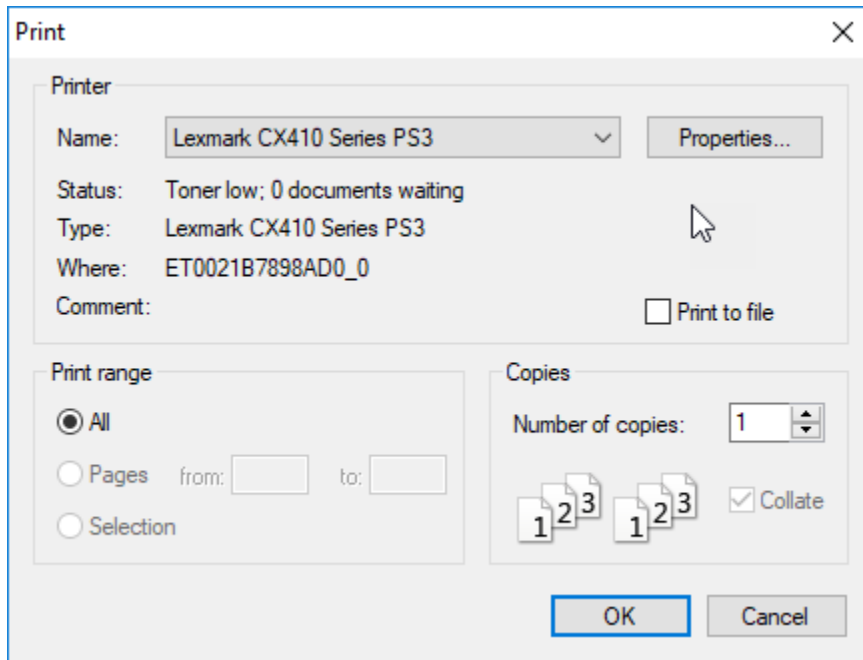

The **Page Setup** menu choice is used to set the **Margins** that Image Print Manager will use if the **Use Margins** option is selected.

The **Print** menu choice is used to choose the **Printer** and set the **Properties** of the printer to be used when printing pictures.
